## NEWSLETTER

Cryolab Eersel strives to optimize the quality of frozen dog semen. For this reason, Meyke van Ineveld conducted a research project into the influence of different centrifuge protocols in correlation with different thawing protocols on the quality of frozen dog semen.

Meyke has almost completed her internship and we want to thank her and wish her every success in the continuation of her education!

In the context of retaining as much genetic diversity as possible for different breeds of dogs, we try to do a lot of research with the help of, among others, Gent University.

In the coming six months, Brit and Michelle, both fourth-year students at HAS University in 's Hertogenbosch, will join our team. They will do their graduation research with us.

Good luck Brit and Michelle!

## NEWSLETTER

In Australia a beautiful litter of 6 healthy Vizsla pups was born from our frozen semen. Congratulations on this beautiful litter!

It is now possible to send frozen semen to the USA in a Cryocube. The Cryocube is a lot smaller and less heavy than a regular dryshipper which makes shipping cheaper. The semen stays at the correct temperature for 5 days in a Cryocube. To avoid the risk of thawing, for now, we only ship semen to the USA in a Cryocube on Monday or Tuesday.

As of 1 January 2019, prices have been increased by 5%. In addition, the VAT has been increased from 6% to 9%.

From 26 February you can log in to the log-in module at [www.cryolab.nl](http://www.cryolab.nl). Earlier this year, you received an email from us with your password. This allows you to log in to the login module.

The stock overview of the straws present can be seen per male in the log-in module. In addition, it also shows how many straws are needed per breeding, how many breedingunits are stored, whether there have been inseminations and whether a transport has taken place.

## NEWSLETTER

2019 will be an important year for Cryolab Eersel, in which we will move to our new premises at Nieuwstraat 63 Eersel. We hope to be able to relocate mid-year.

At the end of 2018 we went to the Winner show in Amsterdam. We have gained a lot of experience with the collection of semen on location before freezing it in Eersel. We want to thank everyone for the pleasant days in Amsterdam!
